

Collaborator Onboarding & Setup Guide

Welcome to **The Daily Drip** streetwear catalog project. This workspace consists of two integrated components: a highly aesthetic, clean, earth-tone minimal React storefront, and a Python CLI Automation Suite designed to manage product syncs via Printify and schedule campaigns via Meta Ads. Use this guide to grant your developer, **Alby**, full access to collaborate, run the server, and sync mockups.

Step 1: Nathan Pushes the Code to GitHub

To allow Alby to collaborate, Nathan must first upload the local workspace directory to a private GitHub repository and invite Alby as a collaborator. Run these commands in your local machine terminal:

```
# 1. Initialize local git repository and commit current files
git init
git add .
git commit -m "feat: initial storefront release with sage earth-tone layout"

# 2. Link your local project to your newly created GitHub repository
git remote add origin https://github.com/nathandcook10/daily-drip.git
git branch -M main
git push -u origin main
```

Important Note: Go to repository **Settings** → **Collaborators** on github.com, click **Add People**, enter Alby's GitHub username or email, and invite him to the repository.

Step 2: Alby Clones & Launches the Storefront

Once invited to the private repository, Alby should open his terminal and run the following commands to install dependencies and boot up the high-aesthetic storefront locally:

```
# 1. Clone the repository and navigate into the project directory
git clone https://github.com/nathandcook10/daily-drip.git
cd daily-drip

# 2. Install dependencies (React, Vite, Lucide-React, Framer Motion)
npm install

# 3. Start the local hot-reloading development server
npm run dev
```

Local Access: The dev server will launch at: **http://localhost:5173**. Alby can view, navigate, and edit storefront code in real-time.

Step 3: Alby Manages Visual Designs & Drops

Alby can expand the storefront, load active t-shirt drops, and run automated scripts easily:

- **Visual Mockups:** Drop custom design flat-lays or artwork PNGs into `public/assets/` inside the codebase. These will be referenced in the catalog.
- **Product Catalog updates:** Open `src/components/ProductList.jsx` and edit/add product catalog entries to live-update the pricing, mockups, and descriptions.
- **Automated Drops:** To run the Printify and Meta program automated suite, add credentials to `scripts/.env` and execute the manager:

```
# Run the automated CLI to create a product on Printify & publish Meta Ads
python3 scripts/daily_drip_manager.py --image "design.png" --title "Sage Streetwear" --price 29.99
```

Quick Command Cheat Sheet

Command	Description
<code>npm run dev</code>	Starts the React development server locally at <code>localhost:5173</code> .
<code>npm run build</code>	Compiles high-performance static HTML/JS/CSS assets to <code>/dist</code> .
<code>python3 scripts/daily_drip_manager.py test</code>	Runs a connection health check against Meta Ads and Printify API services.

Environment Setup (.env)

Copy `scripts/.env.example` to `scripts/.env` and populate it to initialize external services:

```
# PRINTIFY CREDENTIALS
PRINTIFY_API_KEY=your_printify_personal_access_token
PRINTIFY_SHOP_ID=your_printify_shop_id

# META ADS CREDENTIALS
META_ACCESS_TOKEN=your_meta_system_user_access_token
META_AD_ACCOUNT_ID=act_your_ad_account_id
META_PAGE_ID=your_facebook_page_id
```

The Daily Drip is styled using HSL-based organic light palettes matching the Shopify storefront design. For help or adjustments, review the `README.md` in the root workspace.
